Subject: EPA Updates Gold King Mine Response Website with Sampling Results, Documents

Hi all,

I wanted to let you know that today, EPA is posting new surface water and sediment sampling results, along with additional documents related to the Gold King Mine incident.

The new sampling results provide surface water data for September 4-5 and 7-9 from EPA Region 6, and Sediment Data for September 5-9, also from Region 6.

The agency has also posted multiple documents related to EPA's involvement with Gold King Mine. The new documents include EPA's regional "interim use" sampling plans (these are termed "interim" because they may be updated based on changing sampling priorities); contract documents related to EPA's work at both the Gold King Mine and the Red and Bonita Mine; and documents related to landowner consent for EPA access to the Gold King Mine site.

EPA has also updated two of the Gold King Mine webpages to make them more user-friendly.

- The Gold King Mine Data page has been updated with six new cumulative tables (one for sediment results and one for surface water results for Regions 6, 8 and 9) that allow the user to look at all the data collected over time in a single table. The tables remain in Excel for easy sorting by metal type, date collected, results, and location.

- The Gold King Mine Documents page is now organized chronologically, with brief explanations of each document.

The agency continues to frequently update the Gold King Mine response website with sampling data, documents and other information.

EPA's Gold King Mine response website is at: <http://www2.epa.gov/goldkingmine>

Please let me know if you have any questions.

Rebecca
